Genetics has been at the forefront of discourse concerning the concept of “race” in humans. This course explores human history, human variation, human identity, and human health through a broad range of enduring and emerging themes and challenging questions related to race and genetics (and now genomics) on a global scale. Students will acquire knowledge and skills required for integrative analysis of the relevant scientific, ethical, sociopolitical, cultural, and psychosocial issues. Open to students at all levels from any discipline in the arts, humanities, and sciences (natural, social, formal, and applied).

FALL 2016
Lecture: Monday and Wednesday 10:05am – 11:20am
Discussion: Various days & times
Instructor: Charmaine DM Royal, PhD
